Skybound

Turn feedback into goals. Turn goals into progress.

Product plan v2 · formerly AimUp · a non-commercial TeenTech project

> **How to read this plan.** Nothing here is set in stone. Decisions are tagged **Set** (agreed), **Proposed** (current best idea) or **Open** (undecided). Feature status keeps the old rule: a feature is only called working once it has been built and tested. Right now we are in the planning phase and nothing is built.

1. Overview

Skybound helps young people turn coach, teacher or instructor feedback into goals, actions and reviews, so feedback is never forgotten. It should feel like a friendly daily habit, organised, motivated and achievable, never like homework.

> **Core promise: Never lose track of what you're working towards.**

At a glance	
Context	Skybound is our TeenTech project, not a commercial product: no ads, subscriptions or selling. TeenTech wants to see our journey, so we log progress as we go (section 7).
Platform	Progressive Web App (PWA), installable where supported, local-first
Audience	Young people aged about 13–19 doing sports, music or other skill-based activities with regular training or lessons
Three questions	What am I trying to improve? What can I do about it? How have I progressed?
The problem	A coach says "use your weaker foot". The player remembers for a day, has no plan, and arrives at the next session unsure what to focus on. Musicians have the same problem.
What changed from AimUp	New name and brand; blue and white palette; Duolingo-style top bar, bottom bar and visual language; an activity switcher; a mascot (undecided); a tighter, more compact plan. All features carry over.

The cycle

Step	Name	What happens
01	Capture feedback	Record feedback from a coach, teacher, instructor, or yourself.
02	Create goals	Turn feedback into clear goals with optional steps.
03	Choose your focus	Pick the 1–3 most important goals (Current Aim).
04	Take action	Next actions, sessions and goal-linked habits.
05	Review progress	Reflect, then continue, change or retire a goal.
06	Build your journey	History, achievements, personal records and calendar.

2. Brand identity

The name

We asked people informally (not a formal study) to pick between the two names. **Skybound won 30–11.** That is a clear margin from a small sample, so the rename is **Set**.

Point	Detail
Why it works	“Sky” suggests aiming high and progress; “bound” suggests direction and momentum. It fits the sky-blue palette and a bird mascot naturally, and sounds more like a product than AimUp did.
Keep from AimUp	The tagline and the idea of aiming: “Current Aim” can stay as a feature name (Proposed).

Personality and voice

Friendly, upbeat and playful, but not childish. Encouraging, confident, clear, never judgmental. Good: “Keep building your progress.” Avoid: “You’ve failed your streak.” Effort and reflection are celebrated; competition is not.

Colour palette (Proposed)

Colour	Hex	Purpose
Sky blue	#1CB0F6	Brand colour, primary buttons, selected navigation, progress fills
Deep sky	#1899D6	Button “edge” (the chunky 3D bottom border), pressed states, links
Navy	#0F2A4A	Headings, body text, important labels
White	#FFFFFF	Cards, forms, goal surfaces
Cloud	#EAF6FF	App background, soft panels, alternate rows
Mist	#CFE9FB	Borders, dividers, empty progress tracks

Blue and white are the base and should still dominate (roughly 80% of any screen). Most screens need only sky blue, navy, white and cloud.

Multicolour accents for life (Proposed)

A small set of bright accents adds energy and keeps the app from feeling flat, the way Duolingo’s characters and icons do. Exact shades are Open.

Accent	Hex	Likely use
Sunshine	#FFC800	Milestones, personal records, celebrations
Coral	#FF6B6B	Activity colour; gentle attention dots (never an error-style alarm for missed days)
Mint	#3DDC97	Activity colour; completed goals and steps
Violet	#A78BFA	Activity colour; reviews and reflection
Orange	#FF9F43	Activity colour; habits and weekly rhythm
Pink	#FF7EB6	Activity colour; mascot details and fun moments

- **Per-activity colour:** each activity gets its own accent for its tile, icon and header, so switching activities visibly changes the feel of the app.
- **Also for:** mascot, illustrations, achievement badges, celebration confetti, and small icon highlights.
- **Rules:** one accent per card; buttons and navigation stay sky blue; accents are fills with navy text, not text colours, so contrast stays accessible (yellow on white fails); no gradients or glow.

Type and shape (Proposed)

- Rounded, friendly sans-serif with bold headings (Nunito or similar; DIN Round is Duolingo's feel but is not free). Large, readable body text.
- Generously rounded corners, chunky buttons with a darker bottom edge, thick progress bars, simple filled icons. No emoji in place of real icons.

Mascot (Open)

A bird is the leading idea because of the sky theme, but nothing is chosen. The mascot should add warmth and guidance, not nag.

Idea	Notes
Small songbird / swift	Simple, friendly shape; easy to animate and draw in SVG.
Kite (the bird)	A kite is both a bird and a thing that flies on a string, which links to "bound".
Cloud-bird hybrid	Distinctive and original, so less likely to feel like a Duolingo copy.
Paper plane / no mascot	Fallback if a character does not work; the brand can lean on the sky motif alone.

Roles: welcome and onboarding, empty states, small celebrations, optional gentle reminders. **Rules:** never guilt-trips, never shames a missed day, can be switched to quiet or hidden in Settings. Draw it as inline SVG so it stays in the single-file app.

3. Design direction

Heavy inspiration from Duolingo: bright, rounded, playful, with strong hierarchy and constant visible progress. It should feel like a finished mobile product, not a marketing site. We borrow the **structure and feel**, not the exact look: our own colours, icons, mascot and wording, so Skybound does not read as a clone.

Top bar (Proposed)

A slim, always-visible bar in the style of Duolingo's, showing four small stat chips, each tappable:

Chip	Shows
Activity	Icon of the current activity (e.g. football, trumpet). Tap to open the switcher.
Weekly rhythm	Sessions or habits done this week against target. No streaks; rest days are fine.
Current Aim	Progress through your 1–3 focus goals.
Fourth slot (Open)	Milestone points, next session countdown, or something else.

No streaks (Set). Duolingo's streak counter drives engagement but can feel punishing, and it clashes with our never-judgmental voice. The rhythm chip counts the current week against a target and nothing carries over as a "chain" that can break.

Activity switcher (Proposed)

Like Duolingo changing between courses: tapping the activity chip drops down a row of large rounded activity tiles with an "add activity" tile. Each activity is its own space with its own accent colour, with its own goals, feedback, sessions, habits, calendar items and records. The whole app (Home, Goals, Calendar, History) filters to the chosen activity, with an "All activities" view as an option (Open).

Under the tiles, a progress panel for the activity, like Duolingo's "German Score" bar. Working name **Altitude** (Open): a personal level that rises with reflection, completed goals and consistency. It must never rank users against each other and never be an automatic judgement of skill, so its exact formula is Open.

Bottom bar (Proposed)

Large icon-only tabs with a clear selected state, in the style of Duolingo: **Home, Goals, Calendar, History, More**, with a central quick-add button. Tabs use filled icons and a rounded highlight on the active one; small dots mark things needing attention.

Core screens and components

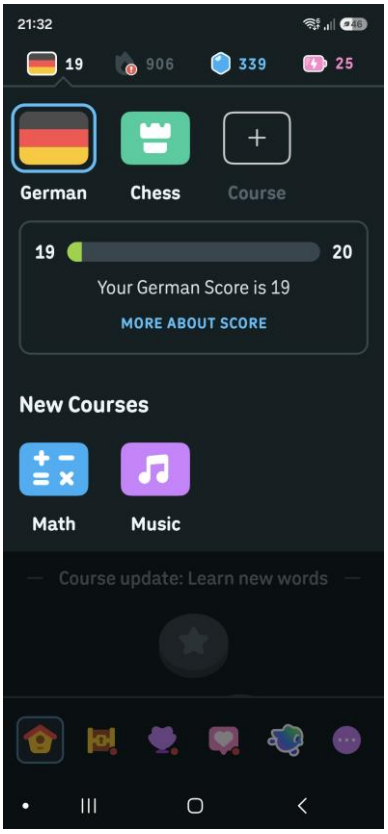

- **Home:** top bar, Current Aim (1–3 goals) as the main card, next session, one clear next action, quick-add. Understandable at a glance.
- **Goal card:** title, activity, priority, progress bar, next action, completion state. Blue for actions and progress; accent colours for the activity and for milestones.
- **Feedback to goals flow:** step-by-step screens with a progress bar across the top, big buttons and a mascot hint, like a Duolingo lesson.
- **Celebrations:** short, tasteful animation after a review or milestone; respects reduced-motion.

Avoid

- Neon colours, random gradients, glow effects, nested cards, tiny or low-contrast text, streak counters, guilt-based messaging, and copying Duolingo’s assets or wording directly.

Reference images

Put reference screenshots from other apps here, one row per UI area, with what to borrow. Replace the “Add image” cells as you collect them.

Duolingo: course switcher and score panel

What to borrow from this screen

- Top bar with four tappable chips (course, streak, gems, energy) and a pointer under the active one.
- Course switcher as a row of big rounded tiles plus a dashed “add” tile: our activity switcher.
- Score panel with a thick progress bar showing current and next level: our Altitude panel.
- Bottom tab bar with large icons and a rounded highlight on the active tab.
- Dark mode looks good here; worth considering a dark theme later (Open).

UI area	What to borrow	Reference
Top bar	Compact chips, tap targets, pointer	Added: see above
Activity switcher	Tile row, add tile, progress panel	Added: see above

UI area	What to borrow	Reference
Bottom bar	Icon style, active state, notification dots	Add image
Goal path / progress	Chunky bars, step indicators	Add image
Lesson-style flow	Top progress bar, one action per screen	Add image
Celebration screen	Mascot, confetti, big continue button	Add image
Mascot and empty states	Character poses, friendly copy	Add image

4. Features

Everything here is **Planned**: we are in the planning phase and nothing in Skybound is built yet. Features 1–20 and 29–38 carry over from AimUp; 21–28 are new. Statuses will change to In Progress and Implemented as work starts and passes testing.

#	Feature	What it does	Status
Core: capture and goals			
1	Quick feedback entry	Activity, coach, session, date and note in under a minute.	Planned
2	Turn feedback into goals	Split a note into goals linked to the original feedback.	Planned
3	Current Aim	Top 1–3 focus goals, shown first on Home.	Planned
4	Goal checklist	Goals and steps, progress bar; parent completes with its steps.	Planned
5	Carry goals forward	Continue, edit, shrink, change or retire unfinished goals.	Planned
6	Goal priorities	High, medium, low.	Planned
7	Quick-add goal	Always-available add button.	Planned
8	Goal next actions	One practical first step per goal.	Planned
9	Definition of success	Personal description, never an automatic judgement.	Planned
10	Goal reviews and adaptation	Quick optional post-session review; continue, edit, reduce, change or retire.	Planned
11	Goal timeline and filters	Feedback, edits, sessions, steps, reviews; filter by status, activity, priority.	Planned
12	Goal template library	Editable templates by activity.	Planned
Sessions, habits and journey			
13	Session scheduling	One-off and repeating sessions, lessons and practice.	Planned
14	Reminders	Pre/post-session, review and practice prompts, limited to what the platform supports.	Planned
15	Goal-linked habits and weekly overview	Optional habits, weekly targets and past weeks; no streaks.	Planned
16	Session history	Searchable timeline with activity filters.	Planned
17	Activity calendar	Sessions, feedback, habit logs, records and own events.	Planned
18	Personal bests and records	Dated achievements with notes and activity.	Planned
19	Meaningful milestones	Celebrate effort and reflection, never competition.	Planned

#	Feature	What it does	Status
20	Progress report export	Date range, choose content, preview, print/export.	Planned
Skybound experience (new)			
21	Activity switcher	Duolingo-style tile row; the whole app filters to the chosen activity.	Planned
22	Duolingo-style top bar	Activity, weekly rhythm, Current Aim and a fourth chip.	Planned
23	Duolingo-style bottom bar	Icon tabs with active highlight and central quick-add.	Planned
24	Activity progress panel (Altitude)	Per-activity level bar; no rankings, no automatic skill judgement.	Planned
25	Mascot	Onboarding, empty states, celebrations; can be hidden.	Planned
26	Celebration screens	Short, tasteful rewards after reviews and milestones.	Planned
27	Lesson-style flows	Feedback-to-goals and reviews as step-by-step screens with a progress bar.	Planned
28	Brand refresh	Skybound name, logo, icons, colours; app name and logo settings updated.	Planned
Platform and care			
29	Local storage	All data on the device; works offline where possible.	Planned
30	Backup and restore	JSON export/import with confirmation before replacing data.	Planned
31	Better data management	Clear storage, backup, restore, delete.	Planned
32	Edit and delete safety	Confirmations before destructive actions; undo where practical.	Planned
33	Widget-style view	Compact in-app view of Current Aim and next session (not a native widget).	Planned
34	Onboarding and example data	Short intro, choose activities, worked example; example data clearly labelled and removable.	Planned
34b	Onboarding for demo	At the star of onboarding have a button that says something like 'are you from fresh minds', which gives a more tour-like experience showing all features, the devlog, changelog, goals, concept features (widgets and stuff) and ensures all parts are seen before it ends.	
35	Appearance settings	Accent colour, font, corner style, app name and logo; keep within the Skybound look.	Planned
36	Accessibility	Contrast, text size, labels, keyboard, touch targets, screen readers, reduced motion.	Planned
37	Guides and changelog	User guide, hidden developer guide, changelog tied to features.	Planned
38	Preserve existing UI and data	Do not remove working features during the redesign.	Planned

Outside the PWA beta

Native OS widgets · reliable background push notifications · coach and club sharing (concept only) · optional account sync · dark theme (Open).

5. App screens

#	Screen	Purpose
1	Welcome and onboarding	Meet Skybound and the mascot, choose first activities
2	Activity switcher	Switch or add activities; see each activity's progress panel
3	Home / Current Aim	Focus goals, next session, next action
4	Quick feedback	Fast feedback form
5	Turn feedback into goals	Lesson-style split into goals, steps, next actions
6	Goals list and goal details	Active, completed, retired; steps, feedback, habits, reviews, timeline
7	Post-session review	Review goals and decide what happens next
8	Habits and schedule	Linked habits, weekly targets, one-off and recurring sessions
9	Calendar and history	Sessions, feedback, habits, events; search past feedback and goal changes
10	Records and milestones	Personal bests and celebrations
11	Templates	Browse and customise goal templates
12	Progress report	Choose, preview, export
13	More: settings and data	Activities, appearance, reminders, backup, restore, user guide
14	Developer guide and changelog	Internal documentation (hidden)

6. Technical plan, privacy and scope

- **Codebase:** keep the single self-contained file (vanilla HTML, CSS, JS) unless there is a clear reason to change. Mascot and icons as inline SVG. No unnecessary rewrites.
- **Data:** keep existing saved data and localStorage keys compatible through the rename (migrate AimUp keys to Skybound safely), add safe defaults for new fields, keep JSON export/import working. Activities become the top-level filter, so existing data is assigned to its current activity.
- **Storage and privacy:** local-first and private by default. No public profiles, no unnecessary data collection, nothing leaves the device without a clear, deliberate decision. Explain that clearing browser data can remove information. This matters because the audience includes teenagers.
- **Notifications and widgets:** only advertise what is implemented and tested; browser notifications only work while the app is open. The in-app widget view is separate from any future native widget.
- **Documentation:** developer guide, feature status list, changelog and notes on data structures, updated as we go.

Out of scope

AI coaching and automatic performance judgements · social feeds, public rankings, leaderboards · ads, subscriptions, monetisation · coach and club sharing in the demo · automatic weekly reports · skill-map or radar charts · match journal and confidence check-ins. No streak counters. Gamification stays personal: no competing with other users.

7. Roadmap

Phase	Focus	Key tasks	Done when
1	Rebrand and app shell	Rename, new palette and type, top bar, bottom bar, activity switcher, data migration, empty states	Skybound shell works, data safe, design system shared
2	Core redesign	Home, goals, forms and screens in the new style; lesson-style feedback flow	Core cycle works in the new look
3	Goal follow-through	Next actions, success definitions, reviews, adaptation, timelines, carry-forward	Create, act on, review and adapt goals
4	Habits and organisation	Linked habits, weekly overview, filters, calendar, Altitude panel	Habits and activity in one place
5	Personality	Mascot, celebrations, milestones, records, templates	Mascot and rewards feel warm, not nagging
6	Progress reports	Date range, content choice, preview, export, print	Report contains only chosen content
7	QA, demo and TeenTech submission	Test everything, accessibility, remove unfinished UI, update docs, prepare demo and final project log	Reliable, demo-ready, log complete

Logging progress for TeenTech

Because this is a TeenTech project, the journey matters as much as the app. We keep the TeenTech project log up to date as we work, not at the end. **Every roadmap phase ends with a log update.**

What we log	Examples of evidence	Log section
Milestones	Dated research, design, prototyping, testing and feedback steps	3. Timeline
Evidence of thinking	Survey tallies (such as the name vote), sketches, annotated screenshots, reference images, trial results	4. Research; 6. Prototype
Decisions and why	What we chose, what evidence led to it, what we rejected (e.g. no streaks)	4. Research
External input	Mentor or expert advice, feedback from users, meetings	5. Collaboration
Who did what	Each team member's role and contribution	7. Team
Next steps and reflection	What we would do next; what we learnt and found hard	8 and 9
Sources	Websites, apps, people and documents we used, with dates	10. Sources

- **Date everything** and keep the original evidence (screenshots, tallies, files) so claims can be backed up.
- **Only log what actually happened.** Planned work stays marked Planned until it is built and tested.
- The changelog and developer guide from the app double as evidence once building starts.

8. Testing and success criteria

Testing is continuous, not just at the end.

Area	Check
Core workflow	Record feedback; split into goals; steps; link back; Current Aim; tick goals; carry forward; edit and delete; data persists after reopening.
New features	Next actions, reviews, linked habits, weekly overview, calendar, records, templates, report export.
Activity switching	Switching filters every screen correctly; adding, renaming and deleting activities is safe; no data leaks between activities.
Design	Narrow mobile and desktop; top and bottom bars; tap targets; readable text; consistent colours; helpful empty states; reduced motion respected.
Data	Existing AimUp data survives the rename; JSON export/import works; replacing data is confirmed; new fields get safe defaults.

Success looks like

1. Feedback can be recorded in under a minute and becomes clear goals.
2. The most important goals are easy to find, and users know what to do next.
3. Unfinished goals can be continued or adapted; habits, calendar and history give a useful overview.
4. Switching between activities feels as easy as switching courses in Duolingo.
5. The interface is polished, responsive, accessible and recognisably Skybound.
6. Existing functionality and data are preserved.
7. It is simple enough to become part of a real training or practice routine.

9. Open questions

Question	Notes
Mascot: which bird, or none?	Sketch two or three options and test them on the same group that voted on the name.
How far from Duolingo?	Heavy inspiration is Set; the line between inspired and cloned is not. Keep our own colours, icons, mascot and copy.
Which accent colours, and how many?	Proposed set of six in section 2; test them against the blue for taste and contrast.
What does Altitude measure?	Needs a simple, fair formula that rewards effort and reflection.
Fourth top-bar chip	Milestone points, next session, or nothing.
Dark theme	Nice to have; later phase.

10. Final product definition

Skybound is a modern, youth-focused personal development app that connects feedback, goals, actions and reflection in one playful experience, with a bright blue and white interface lifted by colourful accents, an activity switcher, local-first storage and clear backup controls.

> **The most important principle: Skybound should help young people make progress in the activities they care about, without making development feel complicated or stressful.**
